VOLVO OIL ANALYSIS

INCREASE YOUR UPTIME

TRUST VOLVO OIL ANALYSIS TO INCREASE YOUR PROFIT

High uptime is what counts when you want to generate profit. With Volvo Oil Analysis you get an unbeatable tool, making it possible for you to plan maintenance as well as reduce the risk of unplanned downtime and expensive repairs.

Simply put, the Oil Analysis is a thorough "health check-up" of the machine's vital systems with analysis of oils in the engine, transmission, hydraulic system, axles and brakes as well as coolant and fuel on request. The Oil Analysis provides early warnings, giving you time to replace components before they cause problems and subsequent damage.

Only the Volvo laboratories have the full knowledge of the Volvo machines and can therefore interpret the results of the analyses and provide recommendations on how to act upon the results better than any other laboratories.

Make sure to perform regular analyses in order to get a history of several oil analyses. This will make it possible for you to see trends.

Easy, fast, and clear

Volvo Oil Analysis is performed in three steps.

THE ADVANTAGES OF VOLVO OIL ANALYSIS

- **Sampling**

The necessary samples are drawn and are then sent to one of the Volvo laboratories.

- **Analysis**

The Volvo laboratories have state-of-the art, advanced diagnostic equipment as well as experienced and qualified personnel. They analyze the samples and collect a vast amount of information, water/coolant content, viscosity, fuel, impurities, quantity of metal particles, and more.

- **Diagnosis**

The thorough diagnosis is immediately available on a web site. The diagnosis provides direct action recommendations, so that critical situations can be avoided.

Save time and money

Apart from helping you to plan maintenance, Volvo Oil Analysis can also give you major advantages in connection with repairs.

When the Oil Analysis indicates the cause of a problem the repair time will be reduced. Minimal time for troubleshooting means reduced downtime.

A feature of the Oil Analysis program is that the results of the analysis with action recommendations are available on a web site. This helps you to take care of urgent matters immediately, before there are costly repairs.

VOLVO CONSTRUCTION EQUIPMENT

A close-up, black and white photograph of a Volvo logo on a piece of construction equipment. The logo is a circular emblem with the word "VOLVO" in a dark rectangular bar across the center. The emblem is mounted on a metallic, rectangular plate. The background shows the curved, metallic surfaces of the equipment, with some motion blur suggesting the machine is in operation.

Volvo Construction Equipment is different. Our machines are designed, built and supported in a different way. That difference comes from an engineering heritage of over 175 years. A heritage of thinking first about the people who actually use the machines. About how to help them be safer, more comfortable, more productive. About the environment we all share. The result of that thinking is a growing range of machines and a global support network dedicated to helping you do more. People around the world are proud to use Volvo.

Not all products are available in all markets. Under our policy of continuous improvement, we reserve the right to change specifications and design without prior notice. The illustrations do not necessarily show the standard version of the machine.
